Registry of Toxic Effects of Chemical Substances

1983-84 Cumulative Supplement
to the
1981-82 Edition

NIOSH

U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES
PUBLIC HEALTH SERVICE
CENTERS FOR DISEASE CONTROL
NATIONAL INSTITUTE FOR OCCUPATIONAL SAFETY AND HEALTH

HOW TO USE THIS REGISTRY

1. The Registry of Toxic Effects of Chemical Substances (RTECS) is a compendium of toxicity data extracted from the scientific literature. All data listed in the Registry are referenced to the sources in which the data appeared. The Registry has not evaluated the data; inclusion herein does not mean endorsement of the reference. Evaluation of the cited references is the responsibliity of the reader.

2. An explanation of changes in the 1983 Registry appears in the Preface (page iv).

3. To find the main entry for a substance:

   a. Look up the substance name alphabetically, ignoring prefixes and numerals.

   b. If the name sought is the Registry prime name, it is preceded by a nine-position alphanumeric RTECS accession number. The complete RTECS data record follows the prime name.

   c. If the name sought is a Registry synonym, it is followed by a "see" cross-reference to the applicable prime name accession number. Look up the indicated number.

4. The data record for each substance includes, where applicable and available:

   substance prime name and synonyms
   date when data record was last changed
   CAS number, molecular weight, molecular formula
   irritation data and references
   mutation data and references*
   reproductive effects data and references*
   tumorigenic data and references*
   toxicity data and references
   IARC and ACGIH reviews
   OSHA, EPA, and DOT standards and regulations
   NTP carcinogenesis bioassay status
   NIOSH criteria document and current intelligence bulletin citations
   NIOSH analytical methods
   EPA TSCA status
   EPA Gene-Tox Program registry agents

*Inclusion of mutation, reproductive effects, or tumorigenic data does not automatically mean that the substance has these effects in humans. See the Introduction for a complete explanation.

An example of a typical RTECS data record appears in Figure 1. An explanation of each data field appears in the Detailed File Description.

5. A complete CAS Number—RTECS Accession Number Index, in numerical order by CAS number, begins on page 1 of Volume I. Those numbers designating substances that appear in this edition (1983-84 Cumulative Supplement) are marked with an asterisk (*).

6. A complete list of all RTECS bibliographic references alphabetized by CODEN appears at the end of volume 2.

NF9050000 HYDROXYPROPYL CELLULOSE
UPDT:8403 CAS: 9004-64-2
SYN: HYDROXYPROPYL ETHER of CELLULOSE * KLUCEL

TOXICITY DATA AND REFERENCES:
orl-rat LD50:10200 mg/kg FAONAU 46A,131,69

STATUS:
REPORTED IN EPA TSCA INVENTORY, 1983
